PowerToolz
Accelerating K2 Success
by jeylabs

If you **automated testing**, how much more time could you spend on things **you love doing?**

K2 Automated Testing, Troubleshooting and Administration

The Solution - PowerToolz for K2

PowerToolz provides three major capability sets. **Automated Testing**, **Administration** and **Trouble Shooting** features for K2.

- Automated Testing enables the user to automate functional and regression testing of K2 Artefacts such as Smart Objects, Views, Smart Forms and Workflows (Process).
- Automated Testing is enhanced with our Test Planner, Test Scheduler and Test Reporter to generate reports.
- Administration feature provides the ability to managing K2 environments, Process Instances, Users and more.
- Trouble shooting feature provides Error fixer, Process Action management and Comparing.
- Validate application quality with functional and regression test automation.
- Enable regression testing for feature regression from one build to the next without tying up tester resources.
- Reduce human error that can occur during activities such as test step execution and test result recording.
